

Application Developer Specialist At IBM

HOUSTON , TEXAS

(248) 938 - 5567

Completed Education Cover Letter

College 42

(2019)

42 is a free code school originally founded in Paris by Xavier Niel. It's not just a free school though, it's a hands-on project-based approach using peer learning as its primary teaching method. It's highly competitive and its cadets (students) are some of the most sought after in the industry. While I was there during the month-long piscine in Silicon Valley California I averaged almost 9 hours a day 7 days a week programming. The curriculum has intensive training in C++, but you start from basic scripts to tying them together to make batch scripts to eventually C++ scripts that you incorporate to build your own libraries you can import from to solve more complex problems. It reminded me of back to the future because when I got home I realized how much easier it is today with all the different frameworks and libraries.

IBM Application Developer Apprenticeship

(2020)

I've successfully completed the 12 Month IBM Application Developer Apprenticeship that's nationally recognized by the department of labor and have received the certificate that shows I have completed self-study with mentorship in an Application Developer Apprenticeship. That I can demonstrate adequate coding skills and applied knowledge of DevOps core practices in a continuous delivery environment. And I have also demonstrated soft skills for client engagement, adaptability, collaboration, communication, presentation, critical thinking, problem-solving, and decision making.

Western Governors University's Bachelor's Degree Of Cloud Computing (2023)

Introduction to IT - D322

(Completed)

Introduction to IT examines information technology as a discipline and the various roles and functions of the IT department as business support. I learned about various IT disciplines including systems and services, network and security, scripting and programming, data management, and business of IT, with a survey of technologies in every area and how they relate to each other and to the business.

IT Foundations - D316

(Completed)

IT Foundations provided me with an understanding of personal computer components and their functions in a desktop system; a knowledge of computer data storage and retrieval; and skills in classifying, installing, configuring, optimizing, upgrading, and troubleshooting printers, laptops, portable devices, operating systems, networks, and system security. In this course I learned the ability to recommend appropriate tools, diagnostic procedures, preventative maintenance, and troubleshooting techniques for personal computer components in a desktop system; strategies for identifying, preventing, and reporting safety hazards and environmental or human accidents in technological environments; and effective communication skills for interacting with colleagues and clients, including job-related professional behavior. This course also prepared me for the CompTIA A+ Core 1 certification exam that I successfully passed.

IT Applications - D317

(Completed)

IT Applications introduced me with skills in identifying operating systems and their configurations and in implementing security principles across devices and networks. I also gained skills in troubleshooting software, security, and malware issues, and in implementing basic operational procedures in documentation, change management, compliance, and communication. The course introduced me to basic disaster recovery and business continuity procedures, scripting basics, and remote access technology solutions and also prepared me for the CompTIA A+ Core 2 certification exam. That I successfully passed and made me eligible to receive the CompTIA A+ Certification and badge.

Network and Security - Foundations - D315

(UnComplete)

Network and Security - Foundations will introduce me to the components of a computer network and the concept and role of communication protocols. This course will cover widely used categorical classifications of networks (e.g., LAN, MAN, WAN, WLAN, PAN, SAN, CAN, and VPN) as well as network topologies, physical devices, and layered abstraction. It will introduce me to basic concepts of security covering vulnerabilities of networks and mitigation techniques, security of physical media, and security policies and procedures.

Thank you for taking the time to review my resume. I look forward to talking with you.

Sincerely,

Jhon Arzu-Gil
